SIMCom LPWA Module Family Introduction

Use Case & Applications

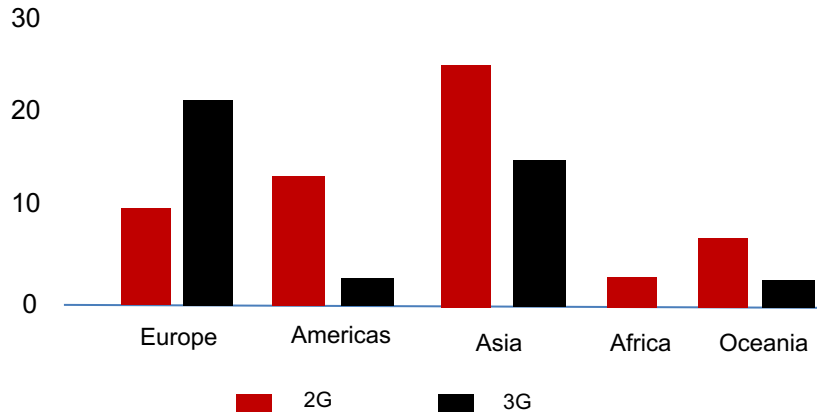

# Operator & Market Updates

# Evolution of Cellular Technology

# Global Operator Network speed up 2G/3G network shutdown process

**Completed and Planned Sunsets  
(2015-2025)**

\*As on March 2021

01

Europe  
3G eclipse

Europe is experiencing more sunsets in 3G than 2G. A total of 19 operators in 14 nations plan to switch off 3G by 2025, whereas only eight operators in eight countries are planning a 2G switch off by same time. The sunset saga in the region started with Net1 being the first operator to completely shut down its 3G networks in Denmark and Sweden in 2015, followed by Vodafone Ziggo in 2020, then Telenor Norway and Swisscom in 2021. Though 3G is newer, it is still retiring in the region because 2G has dishd out a notable edge, especially for M2M and IoT services in countries including Germany, Finland, and Belgium.

02

Americas  
Goodbye 2G

The Americas is on a different path from Europe, focused towards turning 2G off: there has not been a single 3G closure. The region, an early adopter of new technology generations, has seen 13 operators across five countries launching their 5G networks, making it vital to have the required spectrum to foster the services. Here we expect 15 operators in seven countries to switch off their 2G network by the end of 2025. Putting the best foot forward, the operators are re-using their existing spectrum from 2G to fill in the demand for 4G and 5G networks

03

Asia  
2G departure

Service providers in the region are vying to retain their 3G networks and shutting down 2G instead to employ the infrastructure for 4G, which has high adoption. By the end of 2025, we expect 29 operators to shut down 2G and 16 operators to close 3G with Taiwan currently the only market which has witnessed both 2G and 3G sunsets, in 2017 and 2018 respectively.

04

Africa  
Preserving 2G  
and 3G

In this region, 2G markets outnumber 3G twofold, basic feature phone still comprise 42 per cent of all devices and end-users are incentivized to remain on them given lower costs. In turn, this drives lower digital uptake, explaining why a negligible number of sunsets have been announced. Of course, as demand rises, we would expect operators would have to plan for them in future.

05

Oceania  
Precedence for 2G

The region has been quick enough to migrate to newer generation networks as 5G services are available in four countries, whereas others are testing the network for commercial deployments. Today, 2G networks account for only 5 per cent of total connections, having very small amount of traffic across the region. As a result of this trend, Australia, the biggest market in the region, completed its 2G network sunset in 2018. Though operators have not announced their network sunset plans, we expect the region to see more 2G than 3G closures, based on representative shares.

# Massive IoT enabled by long battery duration with reliable connectivity

Cellular IoT connections by segment and technology (billion)

<sup>1</sup> Cat-M includes both Cat-M1 and Cat-M2. Only Cat-M1 is being supported today.

<sup>2</sup> These figures are also included in the figures for wide-area IoT.

# SIM7070/SIM7080/SIM7090 Series Module Block Diagram

## RF Configuration

- Covering all Global regions' main frequency bands to meet customer's different requirements
- SIM7070G triple mode Cat-M1/Cat-NB2/EGPRS
- SIM7070E for supporting 450MHz LTE network
- SIM7080G dual mode Cat-M1/Cat-NB2
- SIM7090G dual mode Cat-M1/Cat-NB2

## Power Management

- Complete power management and clock tree solution
- Efficient power management

## Chipset Platform Key features

- Multi-Mode LTE Cat. M 1, LTE Cat.NB2, and EGPRS triple mode
- Integrated GNSS
- Integrated Cortex A7 support ThreadX and AliOS
- Integrated RAM and Flash

# SIM7070E Module Overview

## Main Feature:

- LCC Form Factor ,24.0x24.0x2.3mm
- CAT-M/NB2/EGPRS triple mode
- Embedded GNSS receiver
- Compatible with SIM7070G design
- Frequency Bands
  - Global version
  - LTE 450MHz network Support
    - CAT M – B31 and B72
    - NB2- B31
    - Power Class 2 in B31 /B72
  - LTE 410MHz network Support
    - CAT M – B87 and B88
    - NB2- B87/B88

Model P/N	SIM7070E Series

# Compatibility Design

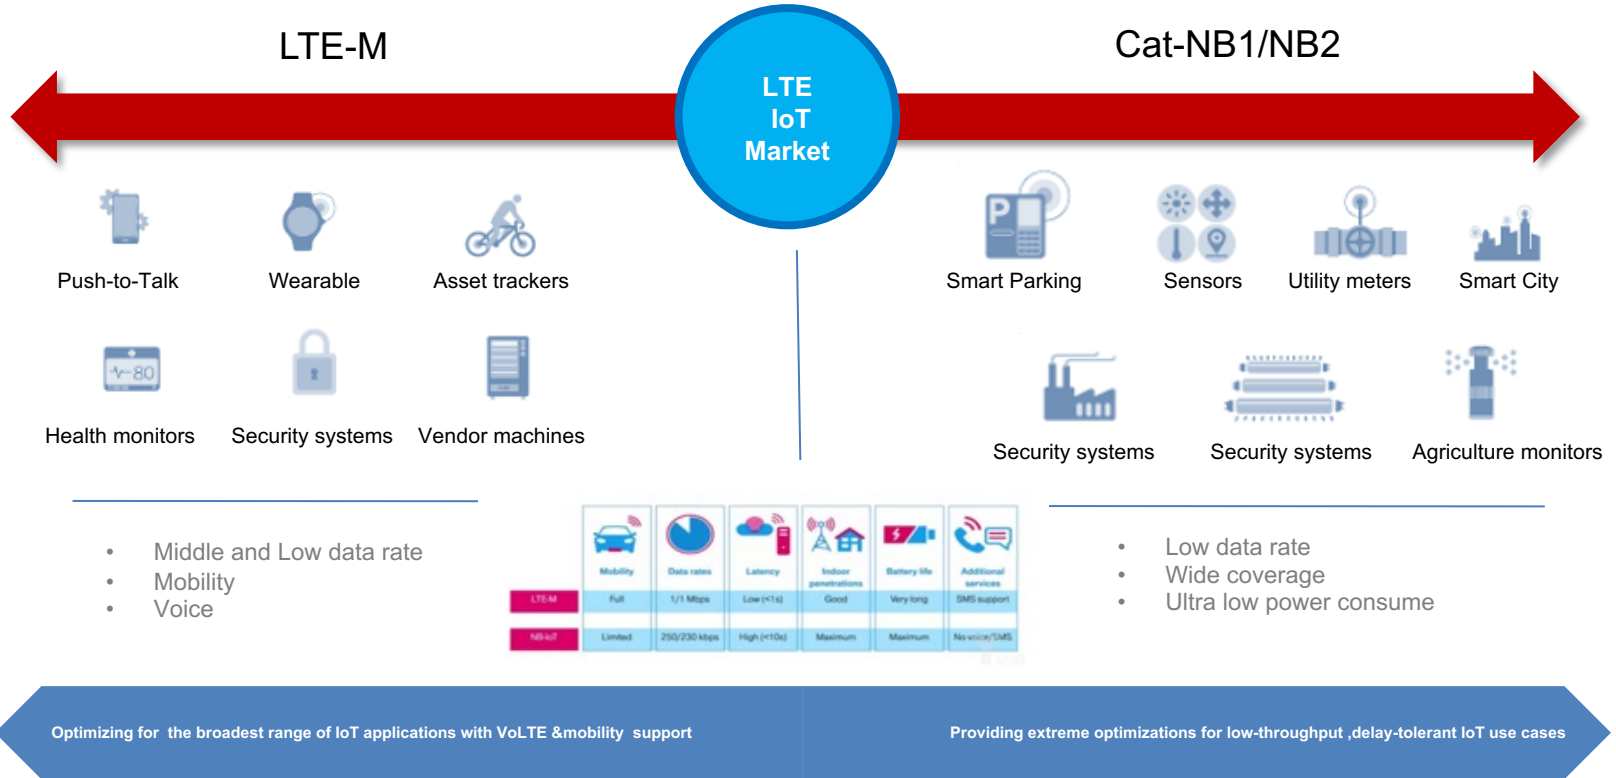

# Technical Information & Evaluation Board Kit

## SIMCom provide the following :

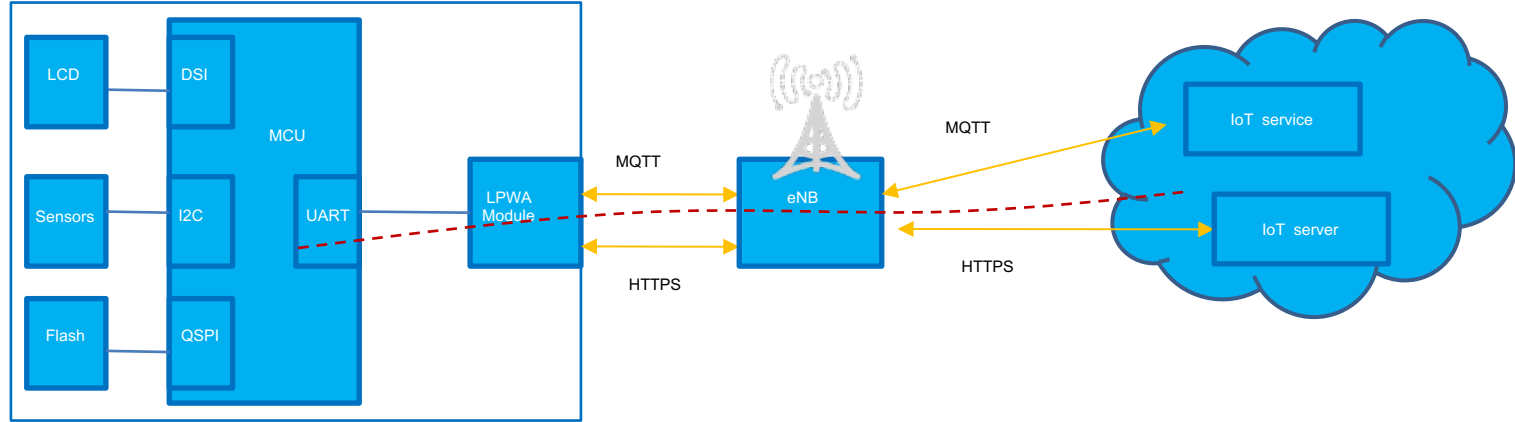

# Use Case & Applications

# Massive application scenario enabled by LPWA Technology

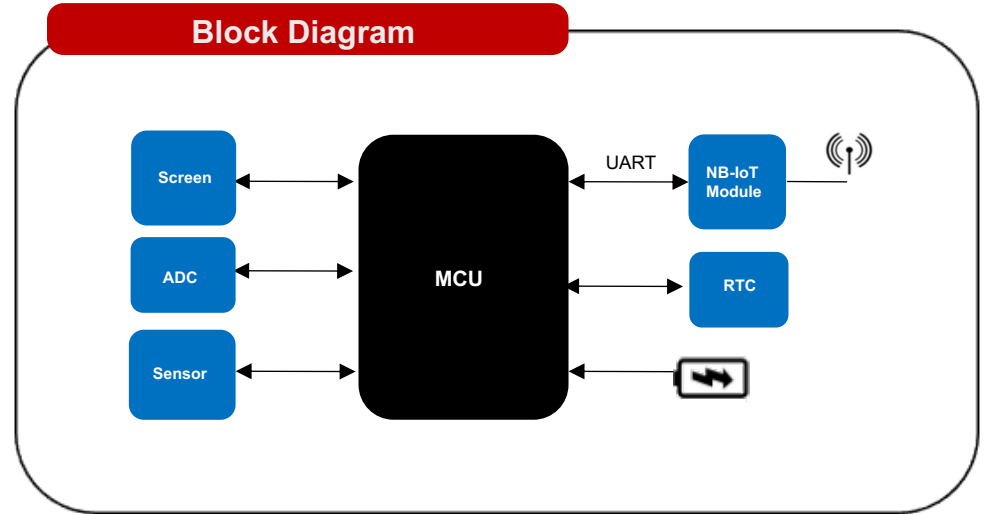

# Typical IoT application architecture for LPWA Modules

## Key Functions

- Update data to Server
- Receive the message from Cloud
- Data transmission by TLS security technology
- Update firmware by FOTA
- AT Command support (3GPP TS 27.007,27.005 and SIMCOM enhanced AT command )

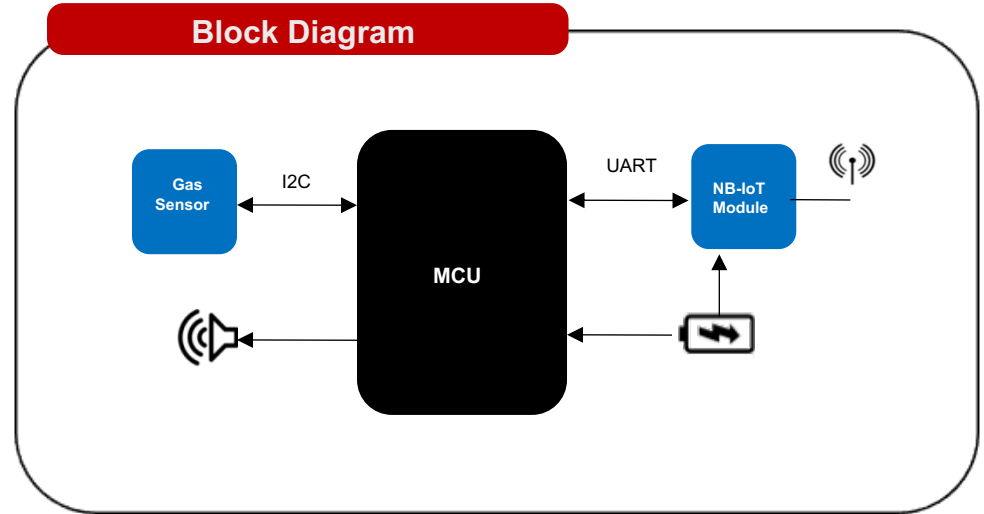

## Key application requirement :

- Low power consumption required
- Above 5-years Battery cycle
- Wide operating voltage
- Complex working environment
- Low cost

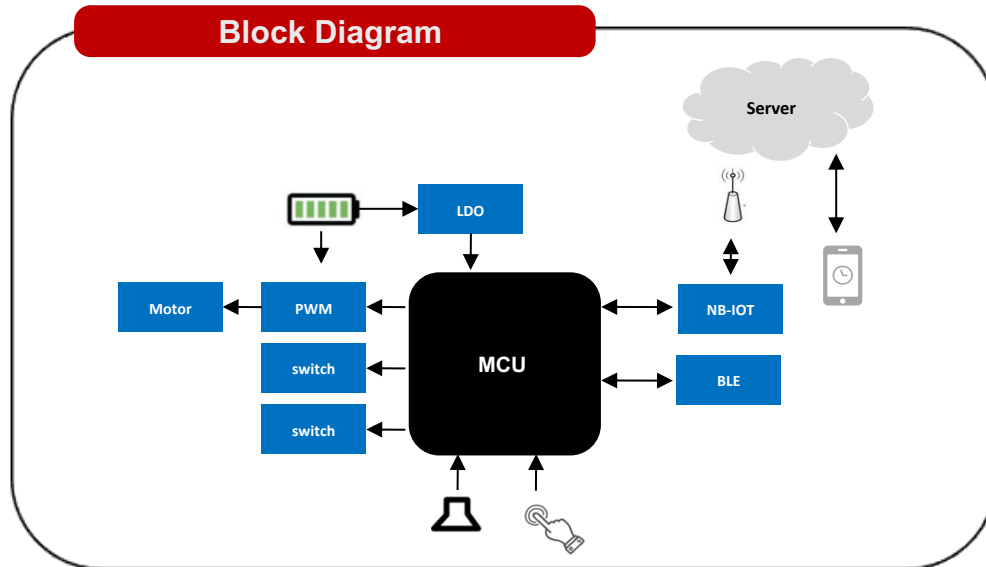

# Smart Smoke detector

## Key application requirement :

- Low power consumption required
- Stable and strong cellular connectivity
- Wide operating voltage
- Local / Remote alarming

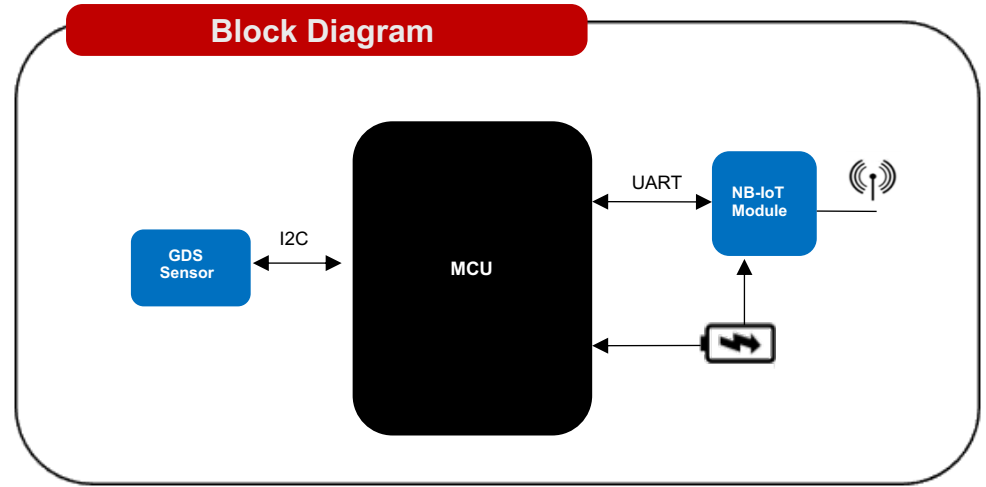

## Key application requirement :

- Low power consumption required
- Use mobile phone to open the door instead
- Not necessary to install IoT Gateway
- Security

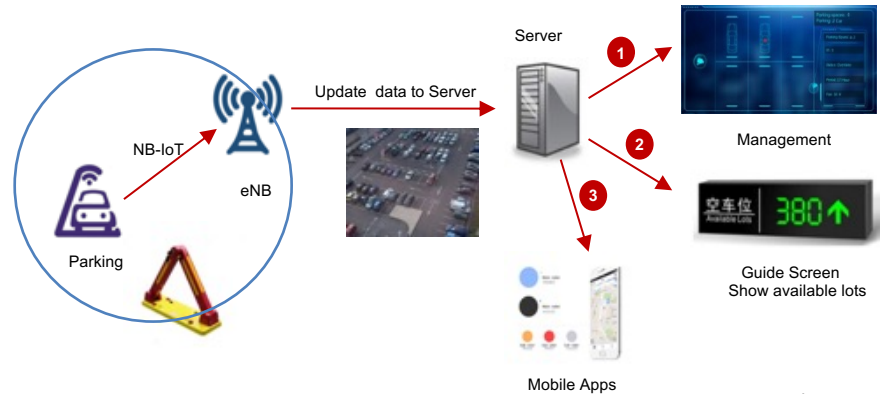

# Smart Parking

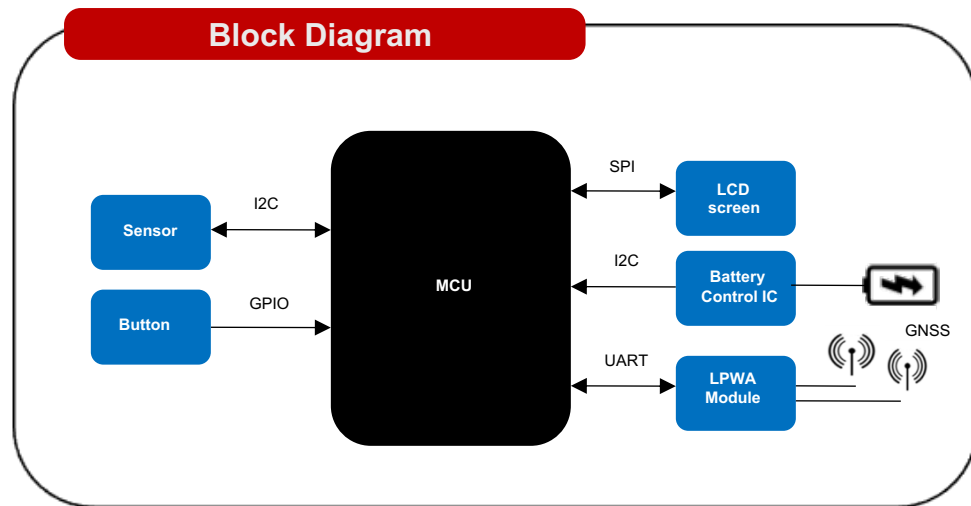

## Key application requirement :

- Low power consumption required
- 10-years Battery cycle
- Strong and Good Cellular module performance

# GPS Tracker

## Key application requirement :

- Low power consumption required
- Fewer PCB space
- Different wireless technologies combine into one module

# Thank you
